

About Us

C.I.T. was founded as interdepartmental and interdisciplinary research centre in 2006, joining competences and research interests from some departments of the University of Pavia (Depts. of Biochemistry, Biology, Experimental Medicine, Orthopaedics, Pediatrics, Physical Chemistry, Systems and Computer Science). Our missions are:

- The research in the field of Tissue Engineering, especially related to bony and muscular tissues
- The collaboration between research subjects, public or private, academic or commercial, national or international
- The formation of young researchers
- The organization of didactical activities for undergraduated and graduated students
- The promotion of seminars and congresses dedicated to Tissue Engineering
- The development of products and services for the national health system
